How Administrations work!

The wet ear drier : As the ring of the chain (1) is pulled and hooked to the hook (2), the right end of the lever (3) pushes up the left end of the lever (4), so that the far end of the latter presses down the pointed bar (5), which wedges between the handles of the plier (6), so that the plier loosens its grip on the neck of the blown up balloon (7)*, thereby releasing the air through the balloon's nozzle, which turns on the little switch (8) placed inside the metal tube wound with electric coil (9), so that the coil heats up the tube and the hot air escapes the tube through a rubber tubing with a jet nozzle (10) which can be held in position for drying the wet ear.

* The balloon can be easily blown up using the administrative device which was illustrated earlier under this feature.
